

Homework #7

Silly Form

DUE: Fri Dec 1, 11:59pm (Accepted up to Fri Dec 22 11:59pm)

Instructions: Open the picture files of the Silly Form called **silly-form-fa18-1of2.png** and **silly-form-fa18-2of2.png**. Re-create it. That is, by looking at the picture of the form, write the HTML code that corresponds to it. Use the appropriate form elements and attributes. Refer to the **Reference Chart for Form Elements** handout. Use your own judgment in re-creating the form and include items #1 through 8 below. Save your file as **silly_form_yourlastname.html**. After completing the assignment, **zip the homework file** and then drop it into the **HW7: Silly Form Drop Box** in Brightspace.

1. Enclose the form in the form tags and use this opening tag:

```
<form name="SillyForm" id="SillyForm" action="mailto:your_email@ecc.edu" method="post">
```

2. Use `
` tags -- line breaks -- as needed to recreate the layout.

3. • Include a fieldset element to surround the whole set of form elements except for the submit and reset buttons.

4. • Include a legend element named "Silly Form" placed directly after the opening fieldset tag.

5. Include a style (embedded or external) that applies a width of 50% to the fieldset:

```
fieldset { width: 50% }
```

6. • Include the First name as a `required` field.

7. Include the additional attribute/values for the following form elements:

- For the First Name and Last Name **textboxes** include `size="20" maxlength="30"`.
- For the City **textbox** include `size="10" maxlength="13"`.
- For the State **textbox** include `size="2" maxlength="2"`.
- For the Zip code **textbox** include `size="10" maxlength="10"`.
- For the Email address **textbox** use `type="email"` instead of `type="text"`.
- For the **dropdown list** include yogurt, pizza and avocados.
- • For the **textarea** element, include `value="Please let us know your comments."`

8. Finally, test your form and make sure it works. For example, only ONE radio button is allowed to be selected at one time. For example, the Clear button should work, and the Submit should possibly try to open your email client program but you can just cancel the window.

For Extra credit -- • Add some styles to the form using embedded CSS.

For the items above marked with a •, it might be helpful to refer to the **Forms_notes handout**.
