

Test 2 test practice items

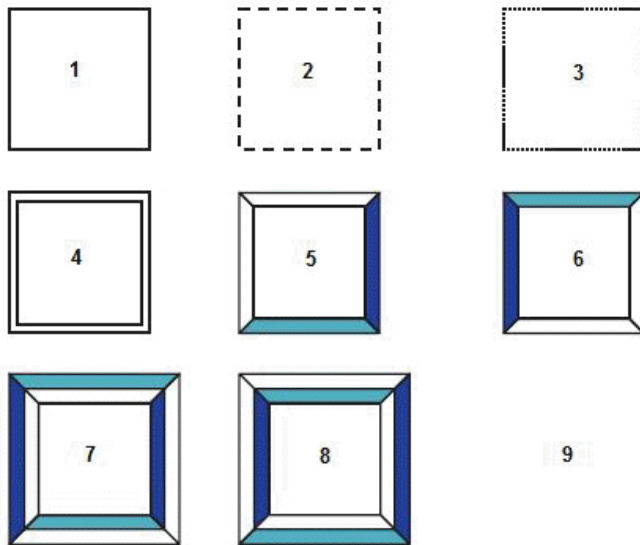

derived from Fa18 test practice documents

SEE ANSWERS AT THE END OF THIS DOCUMENT.**Multiple choice:**Tut 3-CSS-

1. Katelyn is building a Web site and wants to have 3 main links called Home, Product Info, and Contact Us. She has heard of the box model and would like to try and make her links appear as if they were like buttons. She wants each link to appear in a red rectangle separate from each other with a button style edge effect.

To get the links to display separately, what style should she use?

- | | |
|---------------------------|--------------------|
| a. display: list-item | c. display: inline |
| b. display: table-caption | d. display: block |
2. The ____ style can be used to change elements into block level (grouping-level) elements.
- | | |
|------------------|-------------------|
| a. type: block | c. display: block |
| b. format: block | d. block: block |
3. ____ positioning enables you to place an element at specific coordinates with respect to the top left corner of the page (or the top left corner of its containing element). And subsequent elements fill in where the element was. That is to say, the element is taken out of the flow of elements on the page.
- | | |
|-------------|-----------|
| a. Absolute | c. Static |
| b. Relative | |
4. ____ positioning moves an element with respect to where it was. And subsequent elements remain in place.
- | | |
|-------------|-----------|
| a. Absolute | c. Static |
| b. Relative | |

Tut 4 CSS-

5. What is the name of the border style marked 9 in the figure **above**?
