Pizza Form exercise (practice)

<u>Instructions</u>: Open the picture file called **pizzaform-picture.png**. Re-create it. That is, by looking at the picture of the form, write the HTML code that corresponds to it. Use the appropriate form elements and attributes. REFER TO THE **Reference Chart For Form Elements** HANDOUT. Use your own judgment in re-creating the form and making up values for the attributes `name`, `value`, and `id`. Include items #1 through 7 below. Save your file as **pizza_form.html**. After completing the assignment, check your code with that of the solution file included.

1. Enclose the form in the form tags and use this opening tag:
`<form name="pizzaform" id="pizzaform" action="mailto:`*your_email*`@ecc.edu" method="post">`

2. Use line break tags `<br />` and/or <p> tags as needed to create lines of space between the fields.

3. • Include a <u>`fieldset`</u> element to surround the whole set of form elements except for the submit and reset buttons.

4. • Include a <u>`legend`</u> element named "Pizza Order" placed directly after the opening fieldset tag.

5. Include a style (embedded) that applies a `margin` of 2.5em to the form and a `width` of 50% to the fieldset:
```
form {margin: 2.5em}
fieldset {width: 50%}
```

6. Include the additional attribute/values for the following form elements:
    -- For the Last Name **textboxes** include `size="25"` `maxlength="30"`.
    -- For the telephone **textbox** use:
        -- `type="tel"` instead of `type="text"`
        -- `size="13"`
        -- `maxlength="13"`
        -- `placeholder="(nnn)nnn-nnnn"`
    -- • Make the Last name and telephone fields required. Insert `required="required"`
    -- For the **dropdown list** for Pizza of the month include:
        -- January - White pizza
        -- February - Mushroom pizza
        -- March - Buffalo chicken wing pizza
        -- April - Anchovy pizza.
    -- For the **dropdown list** for soft drinks include:
        -- Coca Cola
        -- Pepsi
        -- 7up
    -- For the textarea element include cols="35" rows="6" and wrap="soft".

7. Finally, test your form and make sure it works. For example, only ONE radio button is allowed to be selected at one time. For example, the Clear button should work, and the Submit should possibly try to open your email client program but you can just cancel the window.

<u>Note</u>: For the items marked with a dot •, it is helpful to refer to the **Intro-to-forms-notes_0415**
