Komodo Edit Tips:

- Notice the color coding. For examples tags are one color and content another, etc.
- If you click on an opening tag, the closing tag will be highlighted too.
- If you double-click the opening tag and change it the closing tag changes likewise.
- You can right click on a word to Spell Check it.
- You can get Toolbars to Show/Hide in: View menu: **View** > **Toolbars**. You can customize them too.
- Turn on Word Wrap: **View** > **Word Wrap.** (It seems to be needed to be turned on each time you open the program.)
- Change settings on how your program works in **Preferences** menu (or **Edit > Preferences**). You may be interested specifically in Appearance. You can select an "Appearance" with light text on a dark background or vice versa. I use Classic, a light background, in class to project to the screen more clearly. See SCREENSHOTS below.
- If you make a change to a line, you will see a "changebar" -- a narrow colored band on the left side of it. Click and hold the changebar to access a button to revert this line back to what it was before changing it.
- For Help, click the Help menu: **Help** > **Help**. (This takes you to https://docs.activestate.com)
- Discover something about the program for yourself!
